

NetBow™

Container Irrigation Multi-Outlet Dropper Arc

Installation Manual

NetBow™

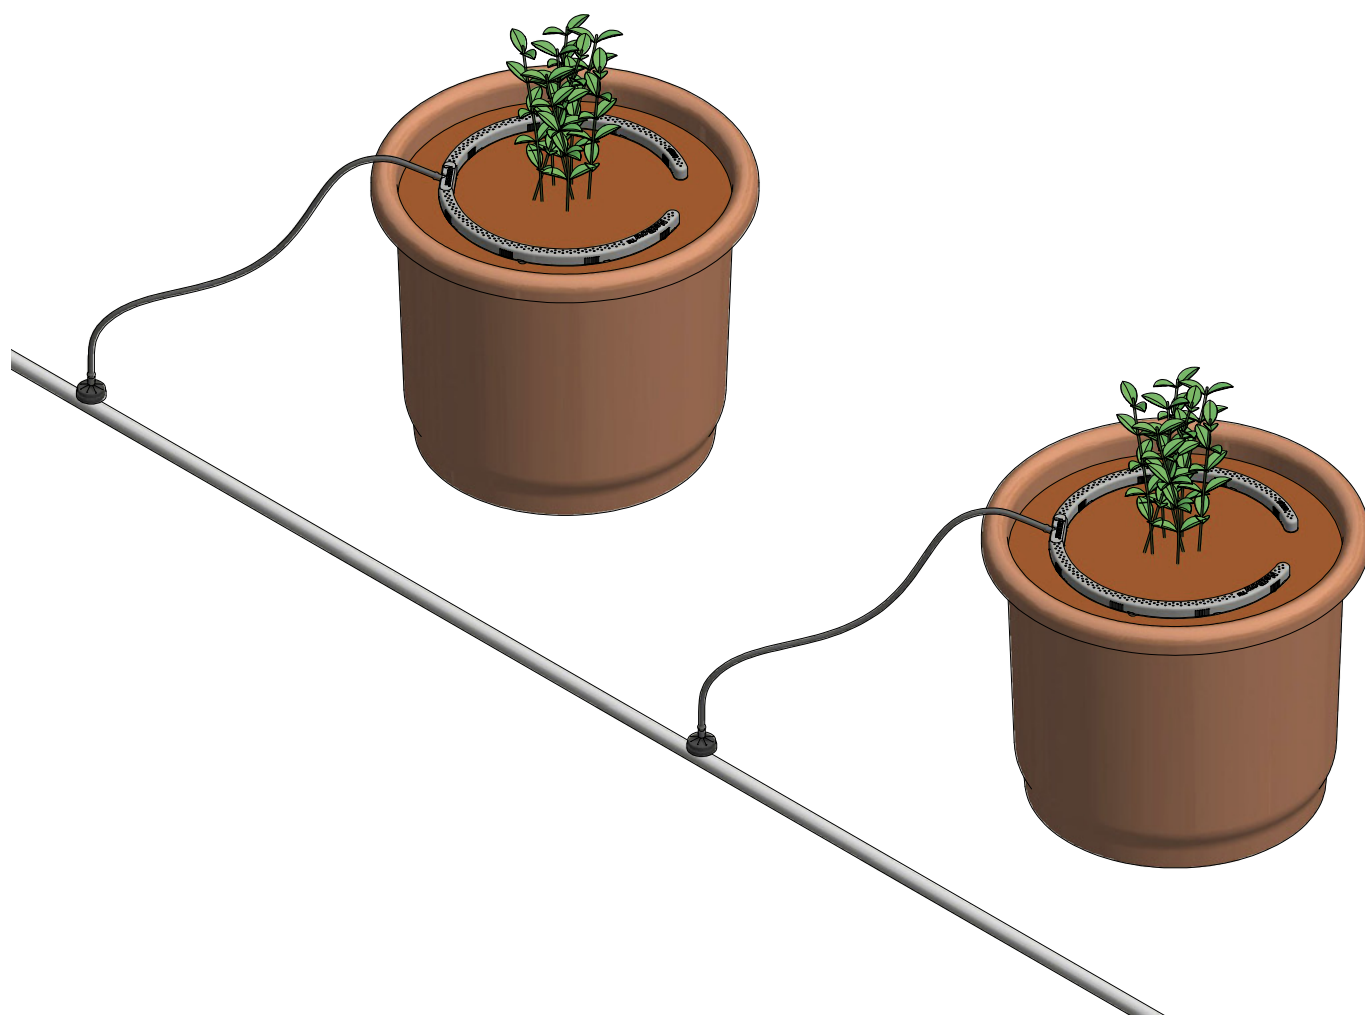

Container Irrigation Arc

An innovative user friendly container irrigation multi-outlet dripper arc with high clogging resistance and superb water distribution

Specs. & Recommendations

- Compatible with 20-40 liters (5-10 gallon) containers
- Diameter: 250mm (10 inches)
- The flow from each dripping outlet is determined by the hub dripper.
- Flow of the hub dripper should be 2-8 l/h (0.43-1.76 GPH).
If your flow/pressure is out of this range follow Netafim guidelines for online dripper design
- Max. operating pressure: 4.0 bar (58 PSI)

Connection options

NetBow™ can be connected to various hub dripper - PCJ, PC, or Uniram™ with Dr. Zip

- When connected directly to water supply NetBow™ delivers 2 l/h from each one of its 8 dripping outlets (total flow rate: 16 l/h) at 1.0 bar.
- When connected to a hub dripper NetBow™ can deliver flow rate as low as ¼ l/h from each one of its 8 dripping outlets (total flow rate: 2 l/h), while maintaining sufficient velocity for self-cleaning.

NetBow™ options of hub dripper

PC online

Uniram™ with Dr. Zip

Installation

- Cut a section of 3X5mm diameter micro-tube at the required length to reach conveniently from the hub dripper to the NetBow™ inlet. Using SSPE (super soft polyethylene) micro-tube is recommended for ease of installation (pre-cut SSPE micro-tube sections of the required length with the required fittings can be ordered).
- Connect it to the barb connector of the hub dripper. If the hub dripper is fitted with a Press-Fit connector, use a Press-Fit to barb adapter (see available options on page 4).

Use the appropriate type of adaptor according to the dripperline and hub-dripper location

- A** If the hub dripper is at close proximity to the pot and the dripperline is located on the surface on which the pot rests, use a straight barb adapter.
- B** If the hub dripper is at a distance from the pot or the dripperline is located on top of the pot, use an elbow barb adapter.

NetBow™ options of connection to the hub dripper

PCJ online

- PCJ with barb connector

PC online

- PC with PressFit connector and straight Press-Fit to barb adaptor

Uniram™ with Dr. Zip

- Uniram with Dr. Zip and straight Press-Fit to barb adaptor

- PCJ with Press-Fit connector and straight Press-Fit to barb adaptor

- PC with Press-Fit connector and elbow Press-Fit to barb adaptor

- Uniram with Dr. Zip and elbow Press-Fit to barb adaptor

- PCJ with Press-Fit connector and elbow Press-Fit to barb adaptor

- Insert the 5 spikes into the 5 holes on the NetBow™ underside
- Place the NetBow™ on the the substrate surface in the pot, surrounding the plant location.
- Connect the free side of the micro-tube to the NetBow™ barb inlet. For NetBow™ with Press-Fit inlet use a straight Press-Fit to barb adaptor
- Insert the NetBow™ spikes into the soil so that its underside is in contact with the soil.

- Adjust the NetBow™ inlet T orientation (up/down) as to allow the optimal micro-tube position.

Make sure the micro-tube is not kinked, pinched or stretched.
