## CERTIFICATE JIFFY POTS

Jiffy Pot is an organic and biodegradable product made from peat, woodpulp, lime and water. Jiffy Pots have no fertilizer addition and no chemicals are used in the production process.

### Jiffy Pot specifications:

White sphagnum peat:	55 % +/- 5%
Woodpulp:	45 % +/- 5%
Lime only to adjust pH:	pH 5.0 +/- 1.0

**White sphagnum peat** is a combination of block harvested and vacuum harvested peat. The peat sources are carefully selected and continuously monitored in order to safeguard the quality standard.

**Woodpulp** from mechanical grinding of spruce wood residues is used in the Jiffy Pots in combination with the sphagnum peat as the "binding" raw material. The wood pulp fibres serve to give mechanical stability to the pot. The production of the wood pulp fibres involves a cleaning and bleaching process by heated water. No chlor containing products are used in the process.

**Lime** is only used to adjust the pH value around 5. The lime material used is powder from the mineral taken directly out of the quarry. The lime is unslaked.

Jiffy pots are dried at 300° C for 30 min. before they are packed in cartons.
